

**IN THE SPECIFICATION:**

Please amend the specification as follows:

Please replace the paragraph beginning at page 12, line 3 through line 12 with the following rewritten paragraph.

In an alternate arrangement as shown in Figure 8, where space considerations are not of primary importance or where a greater space between adjacent movable racks is desired, the U-shaped bracket 76 may have an arm 78 projecting ahead of a movable rack 80 so as to encounter a U-shaped guide bracket 82 having an arm 84 contacting the arm 78. As can be seen in this Figure, the space between the racks 80, 86 is substantially greater than the space shown for example ~~shown~~ between racks 26A and 26B of Figure 1. In Figure 8, space 88 is thereby created into which an operator may walk to retrieve a particular sized tire.
